

SIEMENS

Dallas, TX, August 11, 2011 -Virtual Surveillance, the global leader in the network video market, announced today that Siemens has chosen Virtual Surveillance's Video Management System to be implemented throughout its Mississippi facilities.

This state of the art surveillance system employs IP cameras, recording high resolution video to Network Video Recorders (NVR) with a redundant RAID storage system. Higher resolution video enables security personnel to see more details and positively identify people and objects, which is a key consideration in video surveillance applications.

Siemens also requested a digital signage solution to be integrated seamlessly with the displays for the surveillance cameras. This system allows any combination of four independent camera views, or four different digital signage views to be displayed on any of the 6 large LCD displays located throughout the facility, in any combination. This solution transmits 1080P high definition video over long distances (some exceeding 400') via CAT6 cable.

Siemens is a German engineering conglomerate, the largest of its kind in Europe. Siemens has international headquarters located in Berlin, Munich and Erlangen. The company has three main business sectors: Industry, Energy and healthcare; with a total of 15 divisions. Worldwide, Siemens and its subsidiaries employ approximately 420,800 people in nearly 190 countries.

Virtual Surveillance is a Texas-based company, operating nationwide with partners and integrators coast-to-coast. Virtual Surveillance's video surveillance systems are used for surveillance and protection of multi-site operations. As a direct importer of digital surveillance and security products, Virtual Surveillance provides extremely competitive pricing while maintaining rigorous product quality and reliability standards.
